Sick of getting GOUGED when gas prices go up?

How 'bout a little...

GASPUMP REVENGE?

Thanks to a little-known "loophole" that Ronald Reagan signed into law back in 1986... <u>any American can collect</u> from today's "10-86 'gaspump payback' Plans"

I will show you how to receive up to 12 large payouts per year... with 'Big Oil' indirectly footing the bill. Cover gas costs, fund your retirement, and more.

Around here, we call it the "10-86 Plan." Some also call it the "gaspump payback."

I explain why in just a second.

But whatever you call it, you can thank none other than *Ronald Reagan* for creating it. And you might also have Ron to thank for saving your retirement. In fact, thanks to what Reagan did on **October 22, 1986** you might even use this technique to build a small fortune.

This might be the best part: it's "Big Oil" that could foot the bill.

How so?

See, it was Reagan who helped slip a special "*loophole*" into law many years ago. Surprisingly, this "loophole" remains wide open today.

And a few Americans are already using it to pile up fortunes.

Many more have tapped it to collect up to *three times* as much regular income for retirement. So what exactly is a "10-86 plan?"

It's got nothing to do with buying income-paying stocks. This isn't about bonds or Treasuries either.

Yet, it's still a surprisingly simple way to collect income for retirement...

(over, please)

And anybody is allowed to collect

For instance...

• American investor Mark Hurley says he took in a "10-86 Plan" payout of $21,734 on April 27, 2011. Since then, he's seen his payouts go even higher.

• Businessman Ted Gardner used the "10-86 Plan" loophole to receive over $49,914 on July 28 of this year.

• Lynn Bourdon has tapped her "10-86 Plan" for years. These days, she's getting whopping payouts as large as $140,689.

That's hardly the norm.

Most payouts start out small.

But they can grow larger over time. And even from the beginning, you could collect as much as **three times** the amounts that typical bonds or income stocks pay.

Take Lynn Eisenhans, whose "10-86" payout in early August was $1,215... or Thurmon Andress, who just used his "10-86 Plan" to pick up $10,043... and Bill Barnett, whose "10-86 Plan" recently paid him $11,768.

But if these aren't stocks or bonds, who's forking over this cash? This may be the best part.

See, thanks to Reagan's "loophole," the funds for these "10-86" income streams ultimately get covered by none other than "Big Oil" — companies like Exxon, Chevron, Shell and others who are usually a lot more **tight-fisted** with shareholder cash.

It's no wonder...

One of my colleagues calls this strategy his "gaspump revenge"

Don't get me wrong.

There's nothing wrong with collecting *regular stock dividends*, any way you can get 'em. And when gas prices are booming, classic "Big Oil" companies can pay just fine.

Just don't expect them to pay at the levels we're talking about here.

For instance, take Royal Dutch Shell.

In 2010, Shell had a banner year. And 2011 was even better. They've posted a *77% jump* in profits. But how much of that have they given back to their shareholders? About 4.5%.

Some of the "10-86 Plans" I can show you offer double those yields.

Then you've got British Petroleum.

I'm sure you remember how BP froze their shareholder payouts during their gigantic Gulf oil disaster. But they're back to paying shareholders now. How much? About 3.7%.

Again, not bad.

However, I'd like to show you "10-86 Plans" that could pay you better, and are backed by the same steady American demand for energy resources.

There's also the American oil giant, Exxon. Last year they saw their income spike 41%. How much do their shareholders get?

Just *2.2%*.

What I'm saying is that the three "10-86 Plans" I've found for you also draw in "Big Oil" cash... and then pay out with as much as *triple* the yields other income stocks pay.

If you draw from that energy-backed wealth anyway, doesn't collecting triple the yields from a "10-86 Plan" sound like a good idea? Of course it does.

As *Smart Money* puts it,

> **" ['10-86 gaspump payback plans'] are producing some of the best yields anywhere... some of the sharpest investors in the field are expecting double-digit total returns for some time to come."**
>
> *— Smart Money*

And it's not just the bigger payouts where "10-86 Plans" and stocks part ways.

See, unlike regular "Big Oil" dividends, these "10-86 Plans" can help you...

Collect energy-backed income, even if gas and oil prices crash

How could that be?

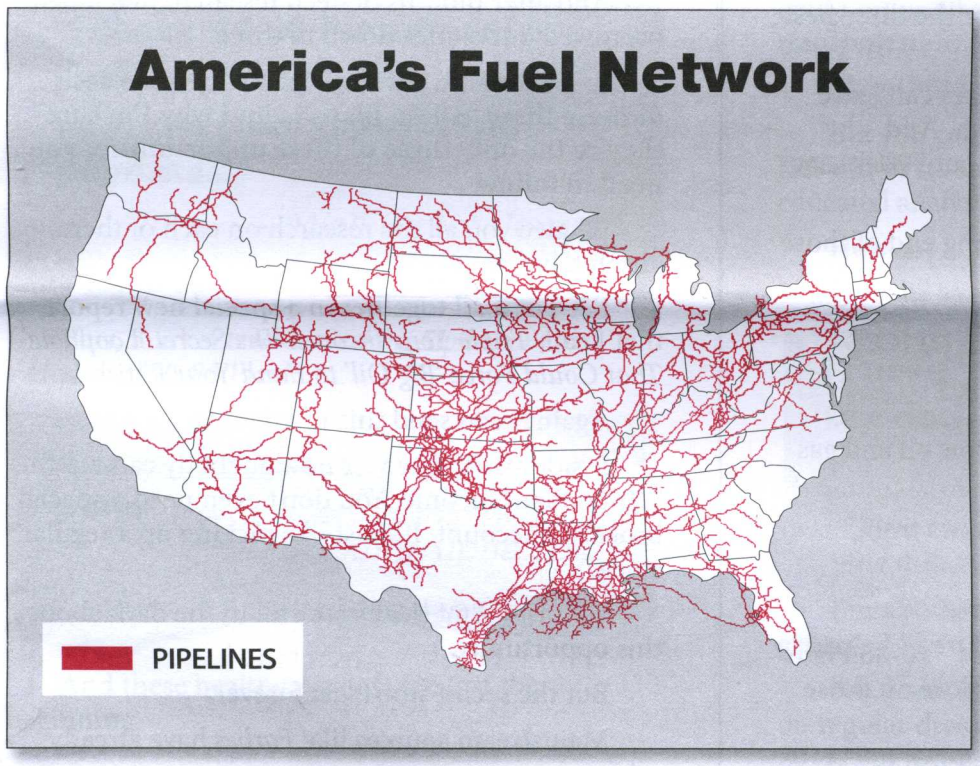
I'm sure you know that Big Oil companies own the gas and oil they sell. That's one of the big reasons why they take a big hit when oil prices drop.

But not "10-86 Plans."

They're energy backed, yes. But they typically don't own *any* oil or gas. Instead, what the "10-86 Plan" operators do is get paid to *move the oil and gas* around the country.

You see, "10-86 Plans" were created to build the **385,000 mile pipeline** network that flows fuel back and forth across the U.S.

Take a look at this map...



While you sleep, the lifeblood of America pulses through this network.

America **cannot** survive without this fuel network.

And neither can Big Oil.

These pipelines flow oil and gasoline across deserts, across snow and across ice fields. Even mountain ranges. Some of the pipes are a mile long, others stretch over 1,000 miles.

Many are buried where you'll never see them, *underground.*

Obviously you couldn't build a network like this without spending a fortune.

That's why Reagan signed his "loophole" to create a way to pay for these pipelines without forcing any one company or the U.S. government to pay the tab.

It's capitalism at work.

Because these "10-86 Plans" allowed investors to band together and build the pipelines instead... in return they get paid **fees** by anyone using their pipes.

It's just like you paying a toll to use State highways.

Only in this case, it's gasoline, oil, and liquid natural gas that are flowing.

And it's Big Oil footing the bill.

These pipes are typically full and flowing, day and night. And the fees pour into the "10-86 Plans" in a steady stream.

Even when gas prices drop, these pipelines typically remain full... flowing fuel from crude oil deposits to refineries and storage fields.

That's how "10-86 Plan" owners keep getting paid. And thanks to Reagan's law, they also get to rake in all that "Big Oil" fee income-tax-free.

That's right.

This is a "for profit" business paying zero federal income tax

How rare is that!

Of course, there's a catch.

See, because they're getting such a big tax break, the plan owners have to agree to pass on a lot of those profits between partners. By law, they have to give out **90%** of that cash.

And then it's just the partners paying tax at their own rates.

In other words, the "10-86 Plan" partners are getting their hands on money coming in... but

(over, please)

without forking over for the usual double-tax other corporations pay.

Here's where you come in...

Anybody can join as a partner and collect a share of this incoming cash.

It's like getting dividends, only bigger — with these plans typically paying out much more than most income stocks pay. And you're not just a shareholder.

You're officially a part owner of the pipelines.

You don't need to do anything. There are no meetings you have to go to. You never even have to see the pipelines. You just take in the cut of the fees Big Oil pays.

Your typical "10-86 Plan" sends out checks four times each year.

And I've found what I believe are the three best of these "Plans" out there today.

Obviously, paying no income taxes can leave "10-86 Plans" with huge pools of cash. And remember, by law they have to dole out 90% it... or risk losing their tax break.

And you could be on the receiving end of those payouts.

Here's why gas and oil prices don't much matter

In up markets, these pipelines flow oil and gas to refineries and shipping depots.

In down markets, the fuel still flows from refineries to storage.

But here's the real key.

You see, unlike the oil companies, "10-86 Plans" don't own the gas and oil. And don't lose on those assets when prices go down.

Because they make money on the *volume* of fuel flowing through their pipes. And the fees oil companies pay to use them are usually fixed. They even go up with inflation.

Cash keeps flowing for "10-86 Plan" partners... you included, if you're one of them.

In a nutshell, that's how using the right "10-86 Plan" can mean cash for you in any market. In some ways, it can be safer than holding straight dividend stocks.

It's that simple.

You can spend the cash as checks arrive. You can plow it into other accounts. You can reinvest it back into the partnership. The choice is entirely up to you.

It can be much easier to predict how much cash will flow in, too.

Because unlike trying to predict the price of oil or gas, it's a lot easier to predict the *volume* of fuel that's going to need to flow through the pipelines.

That also makes it much easier for the partners — that's you — to know how big a distribution they can expect. They can even forecast payout amounts well into the future.

Right now, you have about **90** "10-86 Plans" to choose from.

About 60 are backed by these "Big Oil" fees.

And after months of deep research, I've narrowed our choice down to three.

In a moment, I'll show you why I like each of these three "10-86 Plans"... and why I'm sure they're the only three of these opportunities you need to follow.

I'll give you all my research on each of them, absolutely free.

I've put it all together in a special new report that I call, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*

Again, I can send this to you free.

Inside you'll discover how anybody can tap this "10-86 Plan" income. You don't even need a special broker or account. It's just like picking up a regular stock.

Yet most Americans are still in the dark about this opportunity.

But the secret won't last forever.

Mainstream sources like *Forbes* have already said...

"[These '10-86 Payback Plans' offer]... perhaps the best and most reliable dividends on Wall Street..."

— Forbes

	Just 250 Shares Could Pay You...	Just 500 Shares Could Pay You...	Just 1000 Shares Could Pay You...
"10-86 Plan" #1	$605	$1,210	$2,420
"10-86 Plan" #2	$1,215	$2,430	$4,860
"10-86 Plan" #3	$1,150	$2,300	$4,600
TOTAL	**$2,970**	**$5,940**	**$11,880**

And the *Wall Street Journal* announced...

> **"[These '10-86 Plans' are] A small corner of the financial markets [that] sports big payouts..."**
>
> *— Wall Street Journal*

Plus, market tracker *SeekingAlpha.com* just called the "10-86 Plan"...

> **A true "stealth commodity play."**
>
> *— SeekingAlpha.com*

And these healthy payouts are just the beginning.

Your "10-86 Plan" comes with a fat tax benefit too

See, everyone already knows that when you **buy** gas, you're paying hidden excise taxes, state sales taxes, environmental fees and inspection fees, and the list goes on...

On average, you're paying an extra 48 cents per gallon.

If you're in California or New York, it's more than 65 cents a gallon.

And NOW there's talk of another secret tax buried in the White House healthcare bill that could hit us all again. It's called the "bi-partisan transportation trust fund."

These hidden taxes won't go away.

But you can use your "10-86 Plan" to "**beat the IRS out of its share of the loot,**" as one Harvard-educated analyst told *Forbes*.

How so?

Says the same *Forbes* analyst,

> **[These '10-86 Plans'] "... have tax dodges built in."**
>
> *— Forbes*

First thanks to the Reagan loophole.

But also because "10-86 Plan" income doesn't get taxed like a stock dividend.

See, most income investors know that the tax on regular dividend stocks is going to triple as of 2013. But those new rules won't apply to "10-86 Plan" income.

In some cases, you could go right on collecting "10-86 Plan" while putting off the tax for years to come. It's almost like getting a "silent dividend."

What's more, if you pile up your "10-86 Plan" income over a lifetime, there's a way you could pass on all that money to your heirs... without passing on the full tax burden.

Is this a trick that's just for tax-savvy billionaires?

(over, please)

Not at all.

I can show you how to do this automatically.

It's also in your free copy of, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*

I'll be happy to send you a free copy

Imagine being able to pass income to your family, without passing on your tax bill, with the **full approval** of the IRS. Some of the richest families in America tap this trick.

Some even got as rich as they are, simply using the "10-86" approach.

As *Forbes* put it,

> **"Any fan of big dividend stocks should take a look at ['10-86 Plans']"**
>
> *— Forbes*

And this is about much more than banking on the future of energy-backed cash. Or even about covering what you pay out every year to fill up on gas.

I firmly believe that you could use these "10-86 Plans" to help fund your whole retirement. Not just now but for years ahead. Yet millions of Americans miss out.

That's why I've put together this letter. It's also why I'd love to rush you a copy of my new report.

Once you get started, the checks start coming. It's that simple.

You can spend the income now or you could let it pile up. You could even let it pile up inside the Plan, building gains on top of gains.

Whatever you want to do.

You'll just need to decide to do *something* before that choice is no longer left to you.

After all, these days a move like this isn't just a luxury.

It's more like...

The protection you'll need tomorrow, if not sooner

Look at it this way...

One government study says we spend $50 billion a year protecting our access to Middle East Oil. Another says it's more like $300 billion worldwide

A third study from the Department of Energy, says we've actually blown over $7 trillion over the last three decades, just to keep the gas and oil flowing.

How long do you think it will be before those costs hit you? The truth is they're hitting you already. And not just at the gas pump or on your electricity bill.

Every time you place an order online, for instance, you pay for more expensive shipping. It costs more to box and make the stuff you buy, too.

Higher energy costs show up in your food bill. In your cooling and heating bills. And every time you buy anything that was stored in a well-lit warehouse or raised on a farm.

Higher gas prices cost jobs. They kill commutes. They kill confidence in the U.S. dollar overseas. And that ends up costing you because your savings don't stretch as far.

Even the extra few cents we spend at the pump is money that doesn't get spent elsewhere.

It's no wonder even *Barron's* calls these "10-86 Plans"... "... a valuable hedge against [rising energy costs]..."

Because at least with these Plans, you and the rest of your "10-86 Plan" partners are getting paid every time all that fuel flows through your pipelines.

You're actually making money **because** Americans are hooked on cheap fuel.

As *Forbes* says,

> **"[many who do this]... don't much care about the price of natural gas or crude oil... the appeal is a fat (and so far, steadily rising) dividend payout."**
>
> *— Forbes*

In the midst of this mess, that's the **good news.**

Your double-digit hedge against running out of money

Compare the double-digit returns you could get from the "10-86 Plan" with the income paid out by some of the greatest income stocks of all time.

Phillip Morris, for instance, pays just 3.6% income. But it's also made countless millionaires over the years. Some call it the greatest income stock of all time.

Then there's the 1.88% paid out by Coca-Cola. Yet that plus growth was more than enough to help make Warren Buffett one of the world's richest billionaires

Johnson & Johnson pays just 2.28%. And Procter & Gamble, just 2.1%. But they're both known as "great" income plays.

Imagine making many times those rates, but without many times the risk.

In fact...

Imagine using "10-86 Plans" to pile up $701,125 in 14 years

Just in the 10 years from 2000 to 2010, you could have done pretty well.

A basket of "10-86 Plans" averaged **19.6% per year.** That's enough to grow $10,000 each year into $364,279.

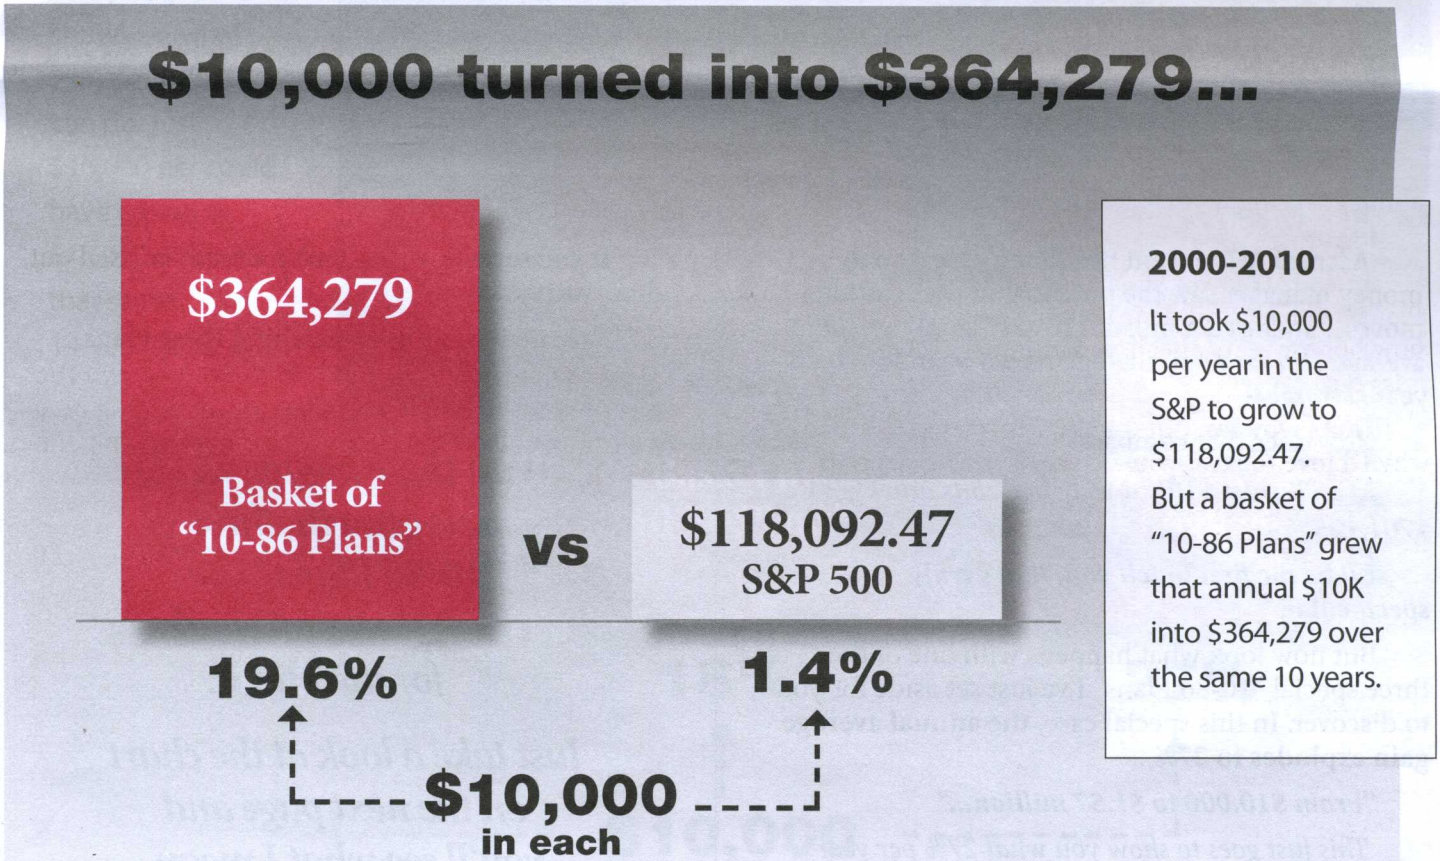
At 19.6%, just $10K a year balloons quickly into over $364,279.

Think about that.

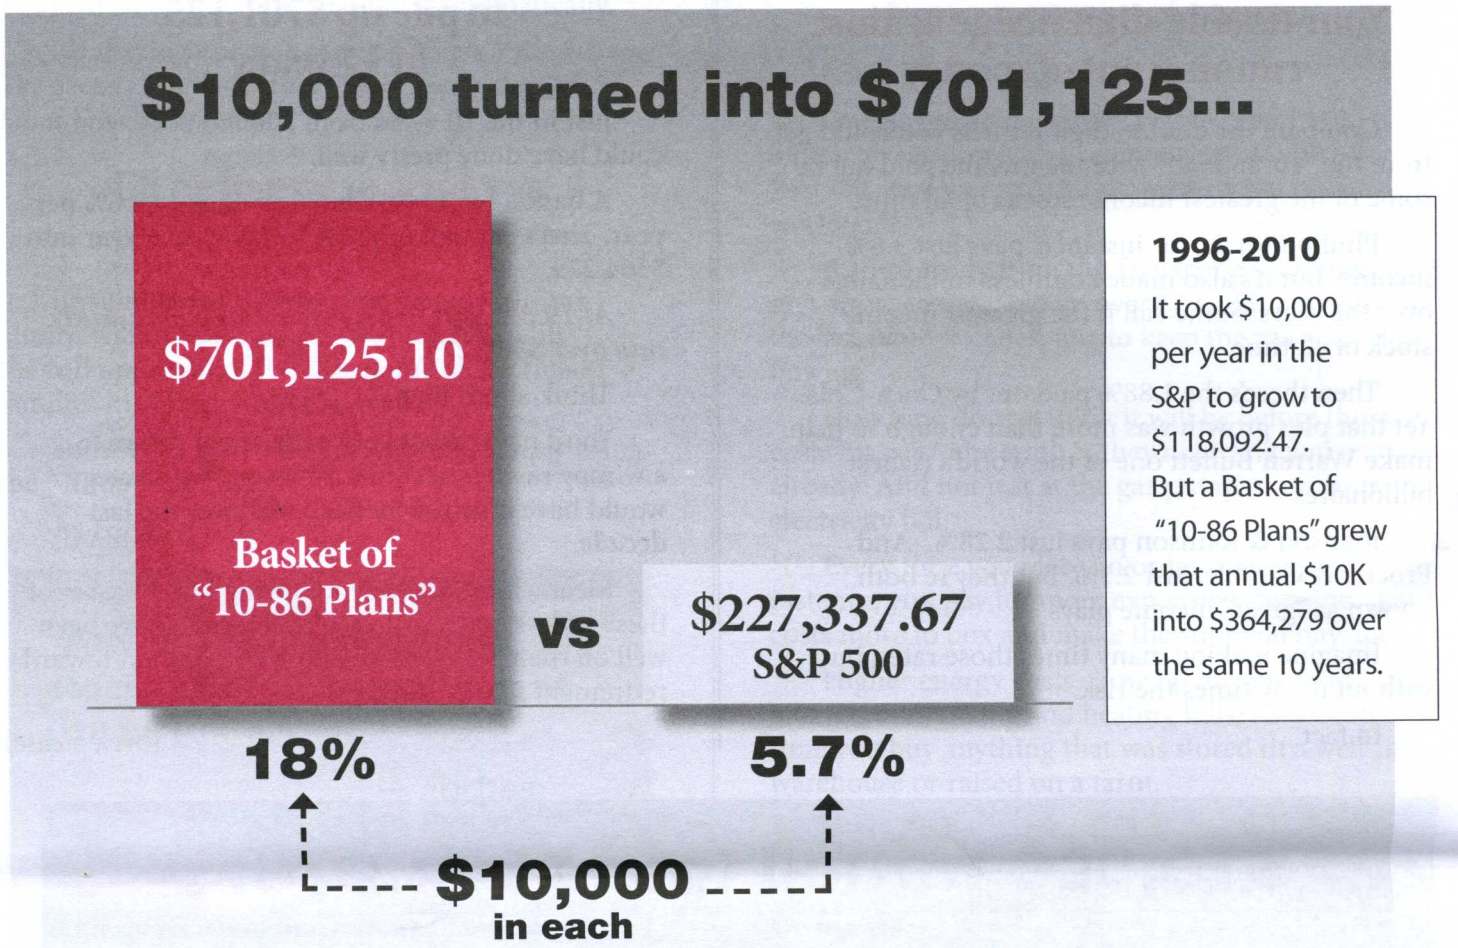
You'd never trust your retirement future to a wimpy savings account. Yet even *that* strategy would have crushed the S&P 500 over the last decade.

Meanwhile, anybody following just a basket of these little-known "10-86 Plans" would have been well on their way to piling up half a million toward retirement in just 10 years.

(over, please)



Go back a little further to 1996 and you could have done even better.



According to recent headlines, at least one money manager saw the potential in these hidden moves... and used a mix of "10-86 Plans" to haul in average 18% compounded gains per year, **fourteen years straight!**

How does that compare?

At 18%, just $10K a year balloons quickly into $701,125.

I'll be the first to tell you, that's truly spectacular.

But now look what happens with one of the three special "10-86 Plans" I've just set aside for you to discover. In this special case, **the annual average gain explodes to 27%...**

"From $10,000 to $1.57 million..."

This just goes to show you what 27% per year can do. Just $10,000 per year could have grown to $1,572,567 from 1996 until now.

If you're feeling like you've already missed out, don't worry.

I've spent months researching these Plans.

With these higher yields plus growth, these "10-86 Plans" can crush stocks or bonds for income.

Just take a look at the chart on the next page and you'll see what I mean.

And I've found the three "10-86 Plans" with plenty of time left for high payouts with lower market risk. They could easily be the only three "Plans" you need to follow.

In just a second, I'll show you which three.

Then I'll show you how to get my full free report, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*

You'll see how much each move pays, how to get started, and how each of these three comes with special advantages most other "10-86 Plans" don't have.

This could be the easiest way to make more income that you'll ever come across. No matter what happens with energy prices, the timing couldn't be better.

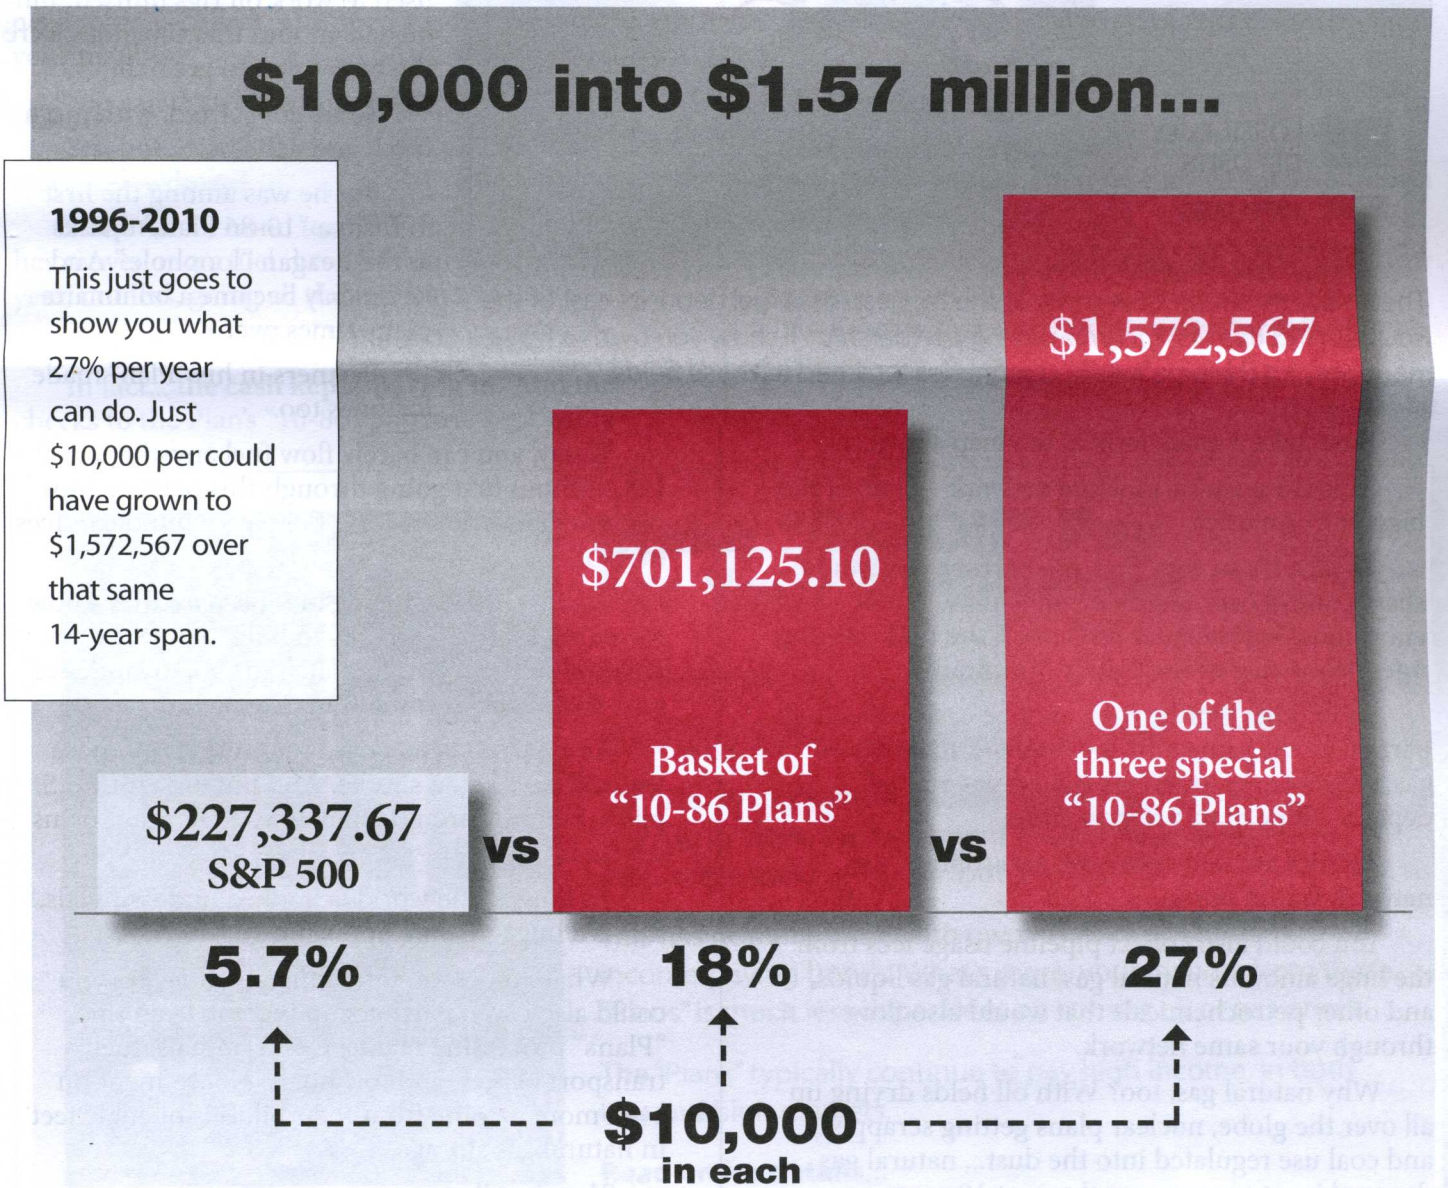
You'll find everything inside, starting with...

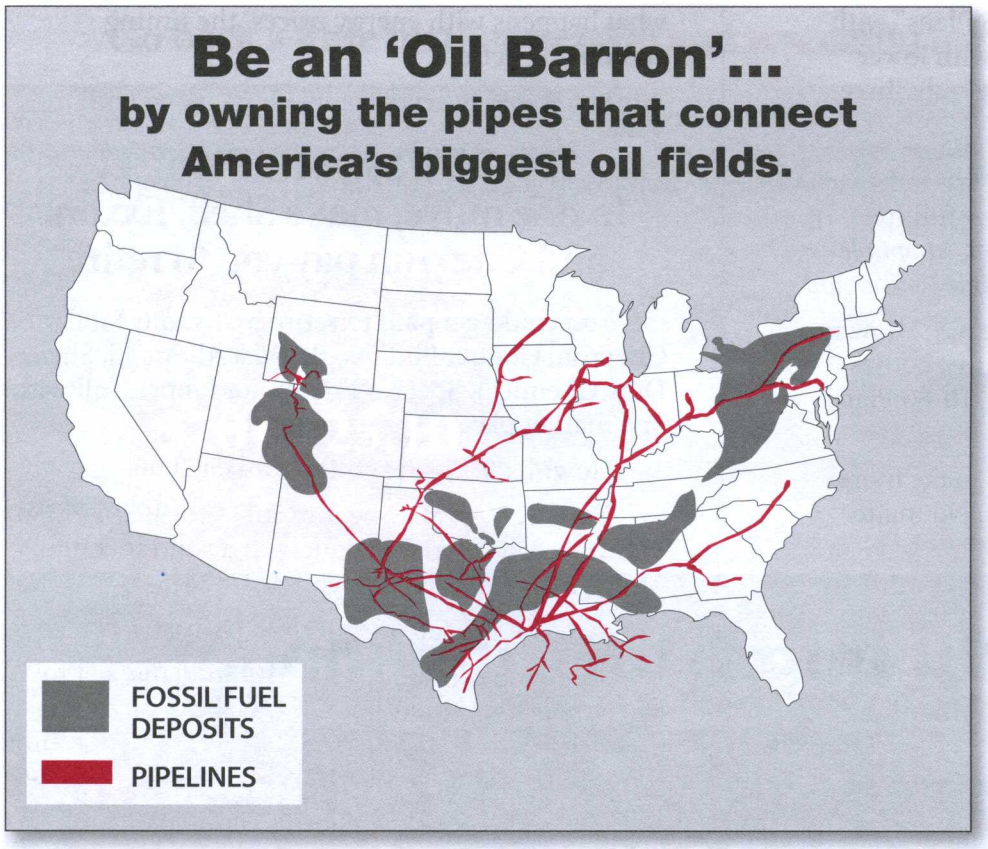
"10-86 'Payback' Plan" #1
In one move, make Shell, Exxon, and Chevron pay you to retire

You could get paid to retire by ExxonMobil, Chevron, ConocoPhillips, BP, Marathon Oil, Shell, Dow Chemical, Spectra Energy, and more... all with one market play.

How?

(over, please)





These shaded spots show some of the biggest fossil fuel deposits east of the Rockies. And this first income-paying partnership I'll show you owns a huge monopoly on the pipelines and refineries attached to those fields.

First, take a quick look at the map above...

This is a gigantic pipeline network — one of the biggest in America.

In fact, it's so vast, that as a partner you would share control over 50,200 miles of pipe. That's enormous. It dominates **95% of all the fuel refining operations east of the Rocky Mountains**.

So in other words, you could be cash-collecting partner in the same pipeline network that carries gas and oil from America's richest gas and oil deposits some of our richest cities.

And it's not just crude oil or gasoline your network would pump.

You could also collect pipeline usage fees from the huge amounts natural gas, natural gas liquids, and other petrochemicals that would also flow through your same network.

Why natural gas, too? With oil fields drying up all over the globe, nuclear plans getting scrapped, and coal use regulated into the dust... natural gas demand is set to soar over the next 10 years.

I even tell readers of my investment research newsletter that, when it comes to income, buying into the future of natural gas could be the "trade of the decade."

That's why I love the fact that this first "10-86 Plan" pipeline network already flows natural gas from over 500,000 acres of prime deposits.

And that's just in Texas and Louisiana alone.

The guy who put this first cash-paying partnership together used to work oil rigs himself. But he had an idea that pipelines were the better way to get rich.

So he got started, with just a truck and $10,000.

But he was among the first to form a "10-86 Plan," thanks to the Reagan "loophole." And he quickly became a billionaire many times over.

Partners in his "Plan" made fortunes too.

Today, you can barely flow fuel anywhere in the U.S. without first going through this partnerships gigantic network. And Big Oil pays a bundle in fees to do it.

Frankly, they're happy too. Because they know it would cost them billions to build a pipeline network of their own to match the 50,200 miles of pipe this "Plan" owns and manages.

As a partner, you could see your cut of those fees roll in. It's that simple. And not just from U.S. pipes, but also from the pipelines this "Plan" owns overseas.

As long as the world is hooked on fossil fuels, this is a huge income opportunity.

What's more, on top of the pipeline fees you could also claim partnership income from this "Plan's" processing plants, fuel terminals, fuel transport barges, and tow boats. Not to mention even more income from their billions of cubic feet in natural gas storage.

There's still more.

Two of this first "10-86 Plan's" newest pipelines tap the rich Barnett Shale fields in Texas.

Another two of your partnership pipes run from the Piceance Basin in Colorado.

A third runs crude oil from the Gulf of Mexico.

And you could see the partnership add another 837 miles of gas and oil pipelines over the next two years.

If there's oil, gas or natural gas produced or shipped anywhere on the U.S. map, there's a good chance — with this first "10-86 Plan" that I'm showing you — you could get a piece of the income it creates.

You don't need to do anything special as a partner. You don't need to go to meetings. All you need to do is collect. The checks start coming to your mailbox.

You can do whatever you like when they arrive.

Yes, but... what if we're in for another long market slowdown?

Keep this in mind too. This first "10-86 Plan" has moved *more* fuel through their pipelines every year, not less, going all the way back to 2006.

Even straight through the 2008 market collapse.

In fact... **the cash kept pouring in**. And the checks to the Plan's "10-86" partners kept going out in the mail. Just like that.

In fact, with this first "10-86 Plan" I'm telling you about... cash payouts have gone up **36 times** since 1998. So almost every one of those checks has been bigger than the last. Just from this one "Plan," you would have seen your income go up **166%**.

Here's something else...

You've already seen how these "10-86 Plans" crushed the returns on the S&P.

With a combined gain of 619%, they've also crushed the last 12 years of gains on gold, silver, hedge funds, REITS, and the Russell 2000.

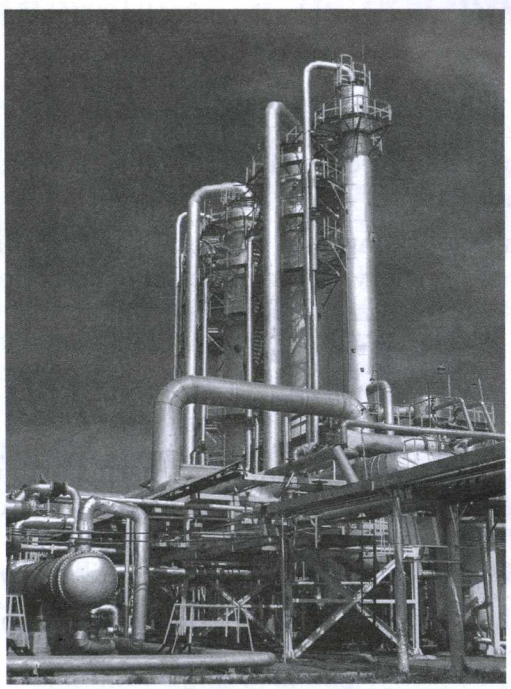
Over that same time, this first "10-86 Plan" I'm showing you ruled them all, with a solid income and growth combined payoff of **1,224%.**

Are you too late for more? Not hardly.

Remember these special "10-86 Plans" get to keep their tax break ONLY if they keep on doling out partner cash. Right now, they've got **$1.8 billion** cash on hand.

That means more big payouts for this "Plan's" partners to come. And you could be one of them, if you act before they cut the next round of payout checks.

(over, please)



Make "Big Oil" Pay for Your Retirement

Oil fat cats got rich on $4 gas.

How'd you like to make them pay you back?

The beauty of the little-known "10-86 Plan" is that you can earn up to triple the retirement income that regular stocks pay... while making Big Oil foot the bill.

This has nothing to do with owning risky oil stocks or income-paying bonds. What's more, your income from these "Plans" is much less dependent on current oil or gas prices.

The "Plans" typically continue to pay high income, in both low and high markets.

Read on for details...

This first "Plan" comes with an extra 5% instant gain that's locked into each payout...

That could be weeks from today. It could even be sooner, just days away.

There's just one more thing.

One special perk of this first "10-86 Plan" is that it lets you lock in an **instant 5% gain** with your very first payout. And you can keep getting that gain with future checks.

How come?

Naturally, your partners like to see you keep your nose in the game. And this first Plan will pay you to do it, with a 5% "bonus" every time you reinvest your payouts.

It's not something you'll get unless you set it up.

But it's easy to do. And it's like picking up 5% more shares for nothing, each time. Which of course means you keep getting a bigger and bigger claim on the "Plan" payouts.

My brand new research report, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement,* shows you how.

And here's something else it will show you...

"10-86 'Payback' Plan" #2

The income hedge: big cash payouts even if down markets

Ten years ago, one of the world's biggest gas and oil companies made a huge mistake. And you can use that mistake to line up a second stream of "10-86" income.

What was the mistake? The giant oil company I'm talking about was looking to drum up cash. So they sold off their own private stake in another giant pipeline and refinery network.

You can guess what happened next. A group of pipeline partners quickly seized the reins... and they've been piling up cash ever since. They've also been doling it out to any partners who signed for their "Plan."

Since 2002, you could have watched the gain on the *shares* of this partnership skyrocket by 337%.

And we're not even talking about the income yet. That's just the shares.

See, this same "10-86 Plan" partnership **also** cranked up their payout amounts a full 24 times over those same years. That's a solid average annual gain of **21%.**

That grows $10,000 a year into **$318,337.**

I can't think of a single "blue chip" you could use to match that.

But again, don't worry that you're too late.

Because, even while sending out piles of partnership cash, these guys managed to snap up another 20 cash-producing pipelines.

Add that to your share of this "Plans" income on 5,400 more miles of crude oil pipeline that run through Texas, Oklahoma, and the Gulf coast.

Plus, the income you'll own a share in from 42 fuel processing terminals and a storage network for over 24 million barrels of crude.

And these fees that "10-86 Plans" get paid by Big Oil are usually fixed to rise with inflation. So your checks keep on growing, should other prices skyrocket.

That's like having...

An "island of stability" for dividend investors

Lots of landlords sit back and collect "rent" for a living.

This is like collecting "rent" on the pipelines, the same way some landlords live on the rent from their properties. Or collecting tolls on your share of a pipeline highway.

Because oil companies share the same pipeline routes, you don't have to worry about competition. You don't do any other work as a partner in the "Plan."

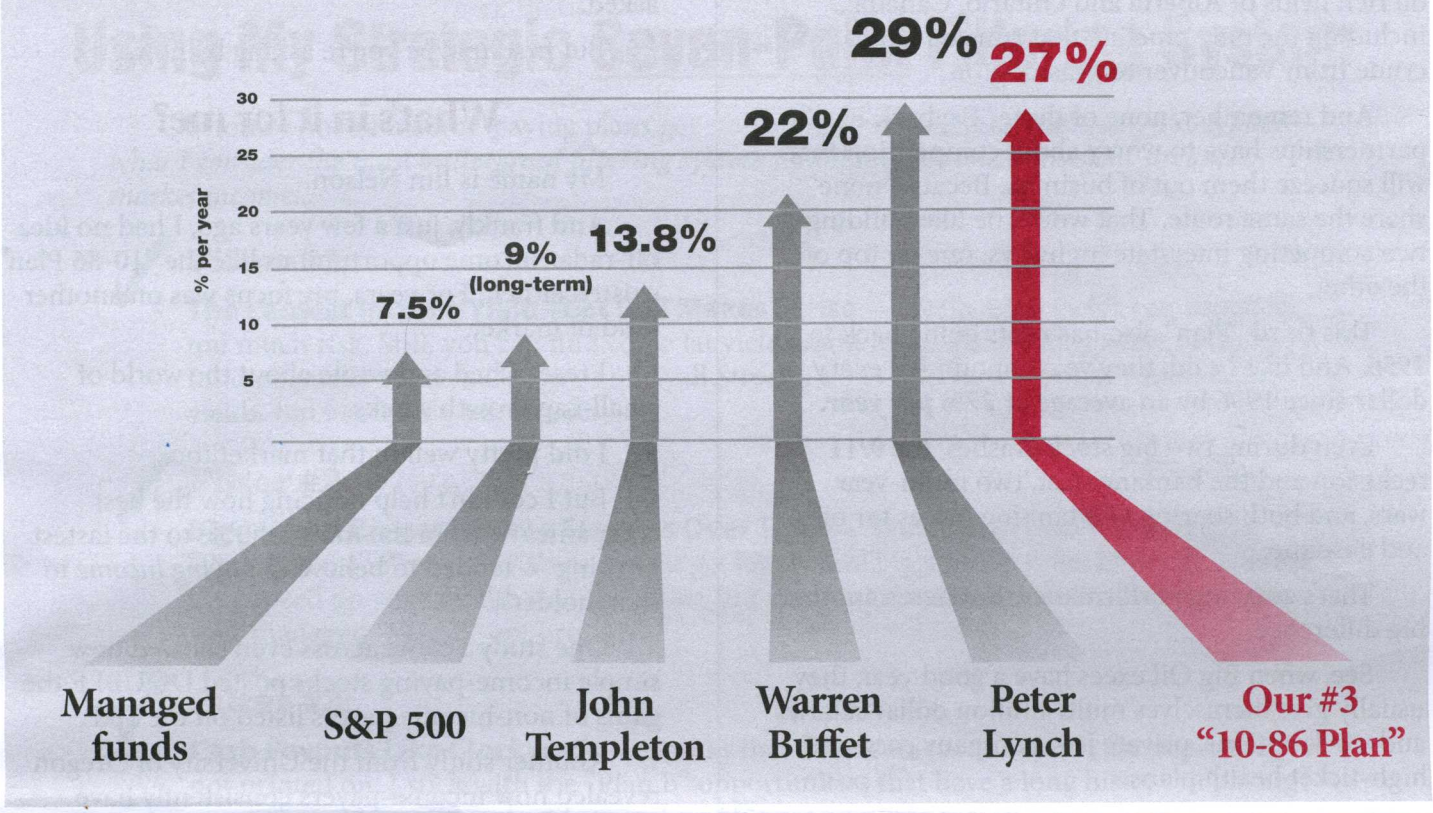
You just decide what to do with your checks as they come in.

And I can show you how to get started with up to 12 checks per year. It's all in my newest research report, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*

I'll show you how to send for it free at the end of this letter.

But first, let me show you...

What Does It Take To Be A Top Investor?



"10-86 'Payback' Plan" #3

How to "match" the best investor gains of all time

What if you could match the market gains of the best all-time investors?

It sounds like a big reach, but my third "10-86 Plan" could help you do just that.

What does it take to be a top investor? Fund managers on average don't beat 7.5% per year. Even including the best years, the S&P 500 averages 9%.

Meanwhile John Templeton became a billionaire averaging 13.8%... Warren Buffett became a giant averaging 22%... and Peter Lynch, a legend at 29%.

The third '10-86 Plan' I want to show you logs in over the last 15 years with a stunning average annual gain of 27%.

With those kinds of annual returns, you could grow $10,000 per year into over $1.57 million in just 15 years. Of course bigger accounts grow even faster. And just like the other two "10-86 Plans" I showed you, this third one **dominates**.

As a partner, you would own a share of the income on 24,000 miles of natural gas pipelines... another 8000 miles of gas, diesel, and jet fuel pipelines... and 2000 more miles of pipelines for shipping crude oil.

That's *37,000 miles* of cash-generating pipelines altogether.

Even *Forbes* calls this third "Plan" a...

"Steady business" with a **"juicy dividend."**

Plus, you could collect on this "Plans'" 400 billion cubic feet of natural gas storage.... pipelines carrying gas from Ohio to Colorado... and another that feeds gas into Chicago.

In fact, you'll be part owner of the largest refined fuel transportation network in America... with over two million barrels of gasoline, jet fuel, diesel, and natural gas liquids moving through the pipelines *you could own* every single day.

(over, please)

And paid for with usage fees charged to Big Oil.

You'll even collect partnership payouts on income-pulling pipes that run in and out of the oil rich fields of Alberta and Ontario, Canada... including the only pipeline that runs oil-sands crude from Vancouver to Washington.

And remember, none of these "Payback Plan" partnerships have to worry about competition that will squeeze them out of business. Because none share the same route. That would be like building two competing interstate highways, one on top of the other.

This third "Plan" also has roots going back to *1956*. And like I said, they've compounded every dollar since 1996 by an average of ***27% per year.***

Even during two big stock crashes, the 9/11 recession and the banking bust, two multi-year wars, and both soaring and tanking prices for oil and gasoline.

That's amazing performance. But here's another big difference.

See, when Big Oil execs have a good year, they usually give themselves multi-million dollar salaries and stock options, private jets, company cars, and high-ticket health plans.

For instance, the former head of Exxon, Lee Raymond, was pulling down $190,915 per *day*. That was before he took home a $400 million retirement package!

Now how do you feel about paying $4 a gallon for gas? How about collecting less than a 3% yield on oil shares?

With the "10-86 Plans" it doesn't work that way. Especially with this third Plan I'm showing you now. The top partner is a Vietnam vet who pays himself $1 per year.

Because, he says, he only wants to make money when his partners make money. It's that simple. No perks, no luxury cars, no corporate jets. Just a laser-like focus on profits.

And that's just one more reason I feel good about urging you to wake up to these little-followed "10-86 Plans." By design, they're made to offer bigger cash payouts than you'll find anywhere in the stock market, while still doing good business.

You owe it to yourself to at least send for my research and see for yourself.

My brand new research report, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement,* fills you in.

And again, I'll rush it to you free... no questions asked.

But first, maybe you're asking by now...

What's in it for me?

My name is Jim Nelson.

And frankly, just a few years ago, I had no idea off-radar income opportunities like the "10-86 Plan" existed either. For years, my focus was on another kind of market.

I researched and wrote about the world of small-cap growth stocks.

I did pretty well in that market too.

But I couldn't help noticing how the best companies — from the most reliable to the fastest growing — tended to believe in *paying income* to shareholders.

One study I came across even showed how simple income-paying stocks posted DOUBLE the gains of non-income payers listed on the S&P.

Another study from the University of Oregon revealed how income-payers consistently have better accounting records, use cash better, and get better business deals, too.

And the income-boost to gains was impossible to ignore.

I'm sure you already know some of these stories as well as I do.

Take **Pepsi**. To own 160 shares would have cost you $4,000 in 1980. But with reinvested dividends, your stash could have grown to over *$300,000* by 2004.

It's the same with **Philip Morris**. You could have started with 58 shares that same year, again for $4,000. By 2004, reinvested dividends put it at $600,000 and 4,300 shares.

Here's another example...

In 2003, you could have picked up 1,136 shares of a company called Terra Nitrogen for about $5,000 total. By 2008 reinvested income and growth took it to $151,026.

Then and there, it was obvious — piling up investment income over time isn't just a way to pad

(continued on page 16)

How You Could Lock in Lifetime Income, Using My Strategic Seven-Point Filtering System

Obviously not all income-paying plans get cut from the same cloth. *That's why I've crafted what I consider the most **bulletproof filtering system** for finding reliable, consistent streams of market income...*

Filter #1:

The Largest Income Yield That Still Makes Sense — Really high yields can signal far too much risk. Still, you can find some fat yields right now... paid out by some of the most fundamentally solid stocks on or off Wall Street. I don't stop looking once I find higher yields, but I certainly start there.

Filter #2:

Bigger and Bigger Income Streams Over Time — What's even better than regular "Plan B Pension" payouts? Payouts that get bigger and bigger over time. Not only because they speed up your wealth accumulation, but also because they're an excellent sign of a well-managed "Plan B" opportunity.

Filter #3:

Cash Payouts Like Clockwork — Checks that don't come aren't worth the paper they're not printed on. I stick with the "Plan B" opportunities that have a long history of paying out and paying on time. And I steer clear of those who don't.

Filter #4:

Businesses Your Mother Could Love — Short-sighted market players may have forgotten what makes for a trustworthy stock, but it's just as basic as ever — lots of cash, very little or no debt, a steady flow of business, and low expense ratios. I don't touch anything that can't pass those benchmarks. And you shouldn't either.

Filter #5:

The Right Industry For the Right Time — Let's face it. Some stocks work for the long term, and work hard. Others work best in some kinds of markets, and a little less than others. I don't try to time markets. But if something looks extra ripe for solid growth and can pay us cash payouts, I see no reason to hold back.

Filter #6:

Payouts as Big As they're Supposed to Be — Some kinds of "Plan B" companies will have a lot of cash to fork over to you. Others, on a percentage basis, should fork over less. It depends on the businesses they're in. If they're paying more or less than they should, that's a red flag you have to know to watch for.

Filter #7:

The Absolute Best Share Price — Even companies that can put steady cash in your pocket have a fair price. I don't recommend paying a nickel more when you don't have to.

an account. It's also one of the single best ways to get very rich.

Today, I have piles of research that prove this. Even better, I've piled up lots of real-time examples. In fact, I've become one of the most sought-after experts on income investing.

We've seen effective yields go as high as 9.3%, 10.4%, 11.7% and even 19.2%. Plus straight out gains at over 99%, 103%, and 137% — on "boring" income stocks.

What I'd really like is to give you a chance to see this yourself.

That's why I want to rush you a free copy of *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*

I'd also like to send you my research on another little-known income move.

It's government-backed "pension" anybody can collect.

And no, of course I'm not talking about Social Security. Even though this "second pension" can also pay you thousands of dollars per year.

So what is it?

You can find out in the second special report I'll send, called *How to Tap the Government-Backed "Pension" Nobody Talks About.*

This is surprisingly easy to do. And unlike U.S. Social Security or even your own company retirement plan, you don't need to hit retirement age to get started.

I also have a **third** special report I'd like to send.

See, you might not think America's rich spend much time thinking about "fixed income" investing. But it turns out the rich have a secret for *locking in* income streams.

For some, in fact, it's one of the tricks that help them stay so rich.

In short, it's a way for you to get *bigger fixed yields* from everyday income paying companies, in a way not all American investors know the first thing about.

I call these bigger, little-known payouts "elite dividends."

They pay a fixed rate, just like bonds. But they're as easy to trade as the same company's regular shares. Only, they can pay better and grow faster than the common stock.

And even though a company can cut the dividend payouts on regular shares, by law they can't cut the rate paid by these "elite dividends" once it's set.

Some of the richest investors in American love tapping into "elite dividend" deals. But that doesn't mean you can't collect these special payouts too.

You'll find out how in my third report, *Elite Dividends That Let You Lock in Safe Payouts For Years to Come.*

Like the others, it's also yours free. And then there's one more. I call this fourth special report,

"Income You Can Count On"

Because, let's face it, what worries retirees more than running out of cash?

And with everything from gas to grocery costs going up, who can blame them?

Yet, in about 10 minutes, I can show you step-by-step how some Americans are beating the retirement "cost curve" and sleeping better at night... by stocking up on bigger and bigger income payouts, sometimes several times each month.

I know of no better way to lock in a lifetime income.

And it's all laid out for you in this fourth free report. All four of these are yours to keep, no questions asked.

All I'd like is for you to do something for me in return. I'd like you to try my new ***Lifetime Income Report*** monthly research letter.

I first made it available on February 6, 2009.

Since then, I've used it to share my research with thousands of income-focused Americans just like you. We've seen some impressive market plays, too.

For instance, we've seen thirty four of our positions shoot up — out of a total forty three — with gains as high as 46%, 67%, 75%, 104%, and 137%.

This year alone, the cumulative gains on open plays are already **403.82%.**

I hope you've seen how, with plays like these special "10-86 Plans," we're set up to make even more. We've also posted effective yields as high as 19.2%

In fact, in our first year, the *average* gain of income plus growth was **15.7%**... in the next year, it was **23%**. So far this year, we're averaging income plus growth of 8.36%.

And we've got effective double-digit yields hitting as high as 10.4% and 11.7%.

One of my readers, Kevin Beck even wrote in...

"Jim, Thanks for spilling the beans! This is the same strategy I have been using for 25 years – ever since finishing high school. I can attest that it DOES work... I started then with about $25,000 and have built this to the millions, while being able to give away millions in the process."

He was talking about a simple two-part strategy for picking up "bulletproof" income in any market.

I shared this with my readers back in January 2009, in an alert that also showed my readers how to lock in income backed by Brazil's exploding energy demand.

We found a move that shot up **104%** before we sold the first half... and another 137% on the second. And that's not including the effective yield of another 11.7%.

Right behind that, I sent out another "flash" alert. In this alert, I showed my readers how to collect three more immediate income payouts.

I gave them specific payout dates and showed how to quickly lock in a tax-free 9.3% yield.

Close behind, I sent five more of these special reader updates.

I like to send these extra alerts to my ***Lifetime Income Report*** readers every week.

One of the updates showed how you could pick up 170% gains on crashing financial shares. Another revealed government-backed yields of 19.2%. And the list goes on.

My point is there's so much to get retirement income that you could be doing... if only you knew about it with time enough to get started.

I take pride in revealing these moves for my readers. I feel even more proud when they write in to tell me how well they're doing.

(continued on page 18)

How I Woke Up To "Work-Free" Income

by JIM NELSON

Frankly, I didn't always follow these kinds of "work-free" lifelong income stocks either. I cut my teeth early out of college, in the world of small-cap growth stocks.

But after years working closely with well-respected publications like ***Penny Stock Fortunes, Bulletin Board Elite,*** and even the famous ***Options Hotline***...

I couldn't help but notice how different kinds of companies tended toward completely different kinds of relationships with their shareholders.

As one greedy company after another churned through shareholder dollars and piled up debt, I quickly developed a passion for those few businesses that stayed true to sound finance... and rewarded loyal shareholders who understood those same values.

Couple that with the piles of research that prove solid income-paying companies can hold portfolios together through all kinds of markets... and I decided on the spot to build the ***Lifetime Income Report*** for my readers.

After a long time in the making, my new ***Lifetime Income Report*** *research service is finally ready to share, along with all kinds of specific ways to draw both immediate and long-term "legacy" cash payouts.*

See the end of this letter to find out how to get started.

For instance, listen to what reader **Barry Landers** recently had to say...

> "Jim, I'm averaging about 12% dividends. I started actively trading last May within a Fidelity 401k and have been getting a good education..."

Then there's ***Lifetime Income Report*** reader **Kirby Darr**, who reports...

> "Jim, It looks like your selections are performing well during the market recovery... one of the biggest advantages of your service is to help predict downturns in price or dividend in order to get out at the right time..."

Clement Contardo, who stuck fearlessly by my approach during the market downturn, writes in...

> "Jim, Despite the big declines in the market these last two days, my portfolio is up significantly..."

And these readers you're hearing from are just a small part of the crowd that's waking up to my new approach to building bigger, better income streams for retirement.

I'd love for you to try ***Lifetime Income Report*** for yourself, risk-free.

In just a second, I'll show you how.

Some of what we'll do together is target the kind of "set and forget" income moves you can put away without losing sleep at night. This is what I call our *Legacy* portfolio.

And it gives you the best way I know to pile up lasting wealth.

Other moves you'll discover are all about picking up income *right now*. My ***Lifetime Income Report*** readers and I call this our *Current Income* portfolio.

These are moves that target bigger income and fast payouts, but *without* the usual risk you might expect with these kinds of high-performance moves.

And then I'll also show you what I call "special situation" income. These are the rare big opportunities to pick up blocks of income where most investors never look.

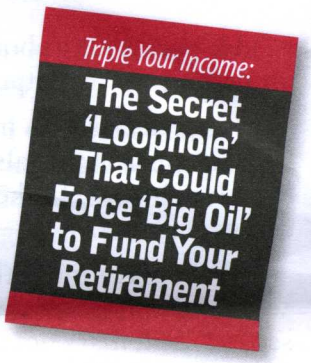
From the steady, rock-solid income to high payouts and big gains on shares, it's all there. And you can try it right now, backed by my full no-risk guarantee.

The twelve "10-86 Plan" payouts you could collect this year more than make this invitation worthwhile. Plus, you'll get to keep all four reports no matter what.

You can even try ***Lifetime Income Report*** for up to a full year — free.

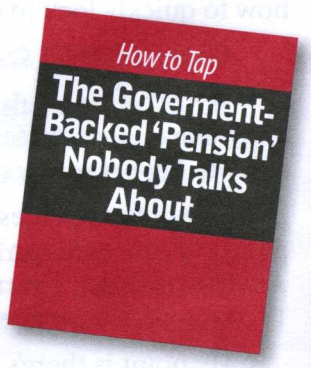
Before I show you how, let's just run through everything you're getting one more time.

First, you'll get a free copy of my newest special report, *Triple Your Income: The Secret 'Loophole' That Could Force 'Big Oil' to Fund Your Retirement.*



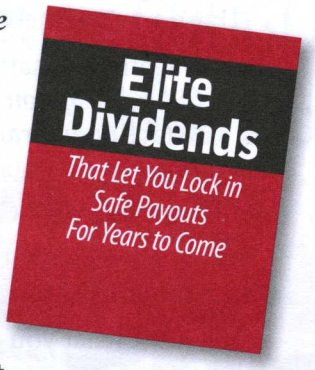
Inside, you'll get complete details on the three best "10-86 Plans" in America today. Few even know these "Plans" exist. And it's got nothing to do with owning bonds or income-paying stocks. Yet, each of these little-known, energy-backed income "Plans" could pay you as much as three times the yields regular income stocks pay.

Second, I'll rush you a free copy of *How to Tap the Government-Backed 'Pension' Nobody Talks About.*



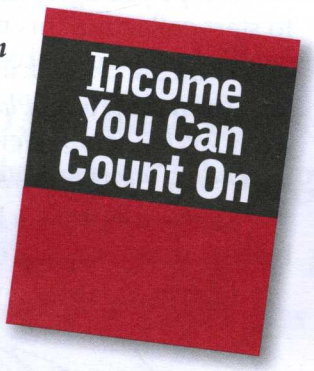
Will you get to collect all the Social Security paychecks you're owed? How about your pension, if you even have one? Nobody can say for sure. But why wait to find out... *when you can collect from this other government-backed "pension" instead?* It's easy to get in and it's backed by real assets, not empty D.C. promises. This bonus move could give you thousands of extra dollars in cash each year. And I show you how to get started, in this second FREE report.

Third, I'll send you *Elite Dividends That Let You Lock in Safe Payouts For Years to Come.*



Rich investors love using this secret for locking in bigger fixed yields from the very same companies that might pay you less, because you only own the regular shares. If there's a fast way to get treated like a "VIP" shareholder, this is it. And anybody can do this, once you know how. It's all explained in this third FREE report.

Fourth, you'll also get a free copy of *Income You Can Count On.*



This final, step-by-step guide shows you how to make sure you never run out of retirement cash. It's so simple it only takes about 10 minutes to explain. Yet I know of no better way to stay ahead of rising prices and seize the retirement you deserve. I explain it all in this fourth FREE report.

Even if you decide my ***Lifetime Income Report*** isn't for you, I'd like you to keep all four of these reports at my expense. I'll cover any mailing costs too. All four are yours free.

Once you let me know you're ready, my publisher will put them in the mail.

The research inside shows you how to collect up to 12 "10-86 Plan" checks over the next 12 months... plus up to 48 income payout "paycheck" opportunities.

That's 60 income checks you're **not** getting right now. Your four reports — yours to keep — show you how to get started. In return, all I ask is that you give ***Lifetime Income Report*** a try.

Each month, you'll get a new issue with my latest research, the newest income opportunities, and a full update on all our ***Lifetime Income Report*** open plays.

Take your time looking it over. You'll have the *full lifetime of your subscription* to decide.

Even if you get to the last issue and decide it wasn't for you, go ahead and cancel for a **full** refund. You can still keep everything you've received, no questions asked.

Doesn't that sound like a fair deal?

Let me make it even better.

Right now, my readers are seeing a top effective yield of 10.4%. If I don't show you income market moves *at least that good or better... or if you're not satisfied for any reason at all...* your entire subscription is on me. Just let me know you've changed your mind and I'll send a full refund, even if it's the last day of your subscription.

Guaranteed.

I'm not afraid to make you such a generous offer, because I'm that confident you'll like what you're about to see. Of course that's entirely up to you to decide.

All I can do is offer you the opportunity.

So what's this really worth to you?

Normally, a full year of monthly ***Lifetime Income Report*** issues would cost you $99. But if I hear from you right now, let's slash that price to $49.

That's better than half off...

Do the math and it works out to just *94 cents* per week.

Think about how that compares to what you could get in return... That includes all the opportunities you'll find in your four FREE reports...

Plus all 12 monthly issues of my ***Lifetime Income Report*** letter... And *52 weeks* of my weekly ***Lifetime Income Report*** alerts.

You won't miss a single update, a single buy or sell, or a single breaking bit of news.

And just to make sure, the moment we hear from you, I'll send you a private password for my ***Lifetime Income Report*** member's only website.

Once you log on, you'll also find instant downloads of all your special reports... a full set of all my past research letters... all the weekly alerts... and my entire open model portfolio.

I don't know of anybody out there who can offer you such valuable income research... and for half the published price. But how about this for an even sweeter deal?

Agree to try my ***Lifetime Income Report*** and all the other bonuses I just described for two years...

(over, please)

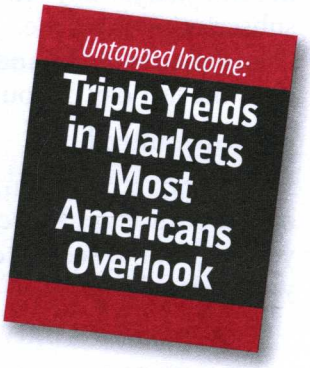
and you'll get double the issues (24 in all) and double updates... for just $89.

That works out to only 86 cents per week.

For twice as many opportunities to pile up a lifetime of bigger income.

Plus, if you take my special two year deal, I'll throw in two more special reports.

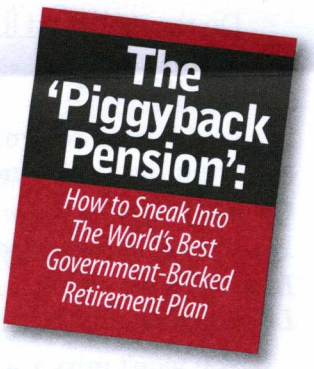
On top of the four you'll already get, I'll also include *Untapped Income: Triple Yields in Markets Most Americans Overlook.*



Let's face it, even the stodgy U.K. stock market offers average yields that are you nearly **four times bigger** than you can get on the S&P. Australia also pays **four times more**. New Zealand pays almost **five times** the average U.S. share. This report unlocks five top yield plays in safe markets overseas.

Plus, you'll get...

The 'Piggyback Pension': How to Sneak Into The World's Best Government-Backed Retirement Plan.



Here's a secret — the "world's best" government-backed retirement plan has nothing to do with Washington. Here's another secret: You can still sneak in, even as an American, and collect a cool dividend of 9%. Let this other two-year special report show you how.

My publisher says I can only offer these two extra research reports as "online only." But that's no big deal... because it saves money that I can pass along to you as a subscriber.

And because you can pick up both these reports... your four other reports... and your latest issue immediately... the moment you check in on the subscriber-only website.

All told, that's *six free reports, all the issues, the alerts, and the special half-off price.* Even better, in fact, than half of... as long as you sign on for the two-year offer.

That's an extremely good deal.

And again, no matter what you're covered for the *full subscription* with my 100% money-back satisfaction guarantee. Cancel anytime, keep everything. No questions asked.

Choose one year, Choose two.

You'll have plenty of time to see what ***Lifetime Income Report*** can do.

If it's not what you expected, your whole trial subscription is on me.

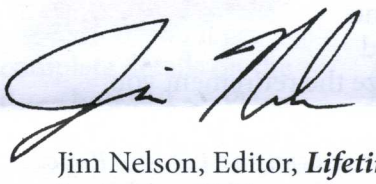
I'll see to it you get a full refund. No questions asked.

I hope you agree you won't see a better chance to start collecting this much extra income. I hope you'll also agree to accept my special offer soon.

The next "10-86 Plan" check could hit the mail a few weeks... even a few days from right now... depending on when you read this letter.

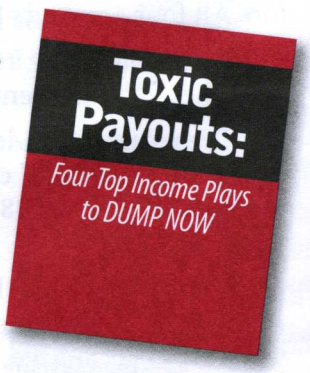
So the sooner you let me hear from you, the better.

Just fill out the enclosed membership certificate.



Jim Nelson, Editor, ***Lifetime Income Report***
September 2011

P.S. How about this? To help make it even easier to decide, I'm throwing in a *seventh* free report. Act within the next seven days will also get a free copy of, *Toxic Payouts: Four Top Income Plays to DUMP NOW.*



This is urgent information that *anybody* holding income stocks needs to have on hand. And it's also yours to keep, as a seventh free gift when you click the button below.

All you have to do is fill out the enclosed acceptance form to get the ball rolling.

Don't wait so long that you miss this special deal... or the next "10-86 Plan" payout!

LIR-JF-0112LTR

"10-86 Plan" No-Risk Savings Certificate

☑ **YES Jim!** **Sign me up for a No-Risk Subscription to *Lifetime Income Report***, so I don't miss out on these simple wealth-boosting opportunities. And I'd love to start by finding out how to use these simple "**10-86 Plans**" to triple my retirement income.

THIS IS NOT INCOME FROM STOCKS, BONDS, OR TREASURIES –
YOUR "PAYBACKS" COME STRAIGHT FROM THE COFFERS OF BIG OIL.
AND WITH FULL LEGAL APPROVAL FROM THE U.S. GOVERNMENT.

Answers to Frequently Asked Questions (FAQ) About "10-86 'Gaspump Payback' Plans"

Q: Did the White House really help create this retirement "loophole?"

Yes, but not Obama's White House. It was Ronald Reagan who signed this into law on October 22, 1986. Yet, few Americans even know this secret income "loophole" exists.

Q: What's this got to do with Big Oil?

For all "10-86" paybacks, it's ultimately Big Oil that foots the bill. But make no mistake, this has nothing to do with owning simple income-paying oil stocks.

Q: But how is this any better than just buying income stocks?

Some of the best-known income stocks pay just 2% and 3% yields. Bonds aren't much better. Treasuries are much worse. "10-86 paybacks" could run three times as high.

Q: Doesn't bigger income mean bigger risk?

Usually. But thanks to a giant break from the IRS and a special quirk of the energy business, "10-86 'gaspump payback' plans" tend to pay out in up AND down markets.

Q: What if energy prices tank?

Unlike oil companies like Exxon, Chevron, and Shell, these "10-86 payback plans" are not closely tied to energy prices. They can profit and send you a cut of the cash regardless.

Q: How much do "10-86 Plans" pay?

*The historical average is 7.8% yields. On the three I'll show you, the **average** yield is 8.11%... with at least one doling out a double-digit effective yield of 10.4%. That's not including any market growth or any tax savings you might see.*

Q: How many times can I collect?

We're tracking three of these plans right now, for a total of at least twelve "10-86" payouts this year. But there's no legal limit on how many 'plans' you choose to collect from or how long you choose to participate.

Hands down, this could be the safest and smartest way for you to tap into double-digit yields today... plus you'll get 'revenge' for paying $4 per gallon for gas!
